

Lisandra Shanell Duvernay Ramírez

| Azure, AWS, Google Cloud Infrastructure Engineer | Cloud Infrastructure | Cybersecurity & DevSecOps

PROFESSIONAL SUMMARY

I am an infrastructure and cybersecurity professional with hands-on experience supporting Microsoft Azure, Microsoft 365, Microsoft Entra ID, hybrid infrastructure, cloud security operations, and infrastructure hardening across public and private-sector environments. I have worked on Azure governance, RBAC, MFA, Conditional Access, Defender for Cloud, Azure Policy, WAF/DNS integrations, monitoring, secure production cutovers, virtual machine deployments, documentation, and operational procedures aligned with ISO 27001, NIST, SIM3, Microsoft Cloud Security Benchmark, and least-privilege practices. I also have practical experience using Infrastructure as Code concepts with Terraform to standardize Azure deployments, and working knowledge of Kubernetes/AKS concepts for containerized workload requirements and cloud-native infrastructure support.

CORE SKILLS

Azure Infrastructure, Azure Networking, Microsoft 365, Microsoft Entra ID, Active Directory, IAM, RBAC, MFA, Conditional Access, Azure Policy, Defender for Cloud, Azure Monitor, Microsoft Sentinel, Terraform, Infrastructure as Code, Kubernetes/AKS Concepts, Virtual Machines, App Services, Storage Accounts, DNS, WAF, VPN, NSGs, Load Balancing Concepts, Hybrid Infrastructure, VMware, Nutanix, Citrix, Windows Server, Linux, PowerShell, Bash, DevSecOps, Azure DevOps, Microsoft Purview DLP, Veeam Backup, WSUS, CyberArk, Fortigate, Sophos, Cisco Umbrella, Elastic/Kibana, Splunk, Incident Response, Disaster Recovery, Business Continuity, ISO 27001, NIST, SIM3.

TOOLS AND PLATFORMS

Microsoft Azure, AWS, Microsoft Entra ID / Azure AD, Microsoft 365, Microsoft Purview, Defender for Cloud, Sentinel, Azure Monitor, Azure DevOps, Terraform, Kubernetes/AKS, Active Directory, VMware, Nutanix, Citrix, CyberArk, Veeam Backup, WSUS, Azure Firewall, Windows Server, Linux, Sophos, Fortigate, Cisco Umbrella, Reblaze WAF, Elastic/Kibana, Splunk, PowerShell, Bash, DNS, WAF, VPN, SFTP, OAuth, SAML, LDAP.

PROFESSIONAL EXPERIENCE

Infrastructure & Cloud Systems Coordinator | DevSecOps

National Cybersecurity Center CSIRT-RD, Dominican Republic | Jan 2025 - Present | Hybrid

- I serve as Infrastructure Lead, supporting the administration, security, and governance of Microsoft Azure, Microsoft Entra ID, Microsoft 365, and cloud/security integrations for multiple government institutions.
- I manage identity and access controls, including Entra ID users and groups, RBAC assignments, MFA, Conditional Access policies, privileged roles, access reviews, break-glass accounts, and least-privilege governance.
- I support Azure infrastructure operations by reviewing resource configurations, access requirements, monitoring needs, service availability, governance recommendations, and remediation of cloud security misconfigurations.
- I participate in tenant hardening initiatives for public institutions by reviewing Microsoft Secure Score, Defender for Cloud recommendations, Azure Policy findings, MFA readiness, Conditional Access gaps, identity risks, privileged access exposure, and Microsoft Cloud Security Benchmark alignment.
- I have used Terraform and Infrastructure as Code concepts to create and adapt reusable Azure deployment templates for resource groups, virtual networks, subnets, network security groups, storage accounts, virtual machines, Key Vault baseline settings, tagging standards, and repeatable infrastructure documentation.
- I support Azure application and infrastructure deployments, including virtual machines, App Services, DNS/WAF routing, access configuration, onboarding workflows, monitoring requirements, and secure production cutover coordination.
- I have reviewed Kubernetes/AKS and container-based workload requirements with technical teams, focusing on cloud networking, identity, access, monitoring, and security considerations before deployment.
- I operate and integrate cybersecurity and network platforms such as Elastic/Kibana, Sophos, Fortigate, Cisco Umbrella, Reblaze WAF, Office 365 tenants, and related monitoring/security services.
- I support Microsoft Defender for Cloud and security monitoring workflows to identify misconfigurations, review recommendations, prioritize remediation actions, and validate closure of findings.
- I contribute to DevSecOps practices in Azure DevOps, including secure deployment reviews, access controls, policy/compliance checks, and security baselines before release.
- I collaborate with SOC, infrastructure, development, and institutional teams to troubleshoot identity, cloud, WAF, DNS, access, and connectivity-related issues.
- I deliver and support mentoring and awareness sessions for children, students, and public-sector institutions on cybersecurity fundamentals, cloud security hygiene, tenant hardening, identity protection, MFA, secure access, phishing prevention, and responsible technology use.
- I create technical documentation, architecture notes, operational procedures, hardening guides, runbooks, and governance artifacts aligned with ISO 27001, NIST, SIM3, Microsoft Cloud Security Benchmark, and least privilege best practices.

Cybersecurity Policies and Procedures Analyst | Previous Role

- I created, reviewed, and audited cybersecurity policies, procedures, control narratives, and operational runbooks aligned with ISO 27001, NIST, SIM3, Microsoft security practices, and institutional governance requirements.
- I translated cybersecurity and compliance requirements into practical controls for identity, access management, incident response, business continuity, data protection, logging, vulnerability remediation, and secure cloud operations.
- I supported governance, compliance, and audit readiness by reviewing evidence from cybersecurity tools and operational processes, identifying control gaps, and recommending improvements to strengthen security maturity.
- I reviewed controls and audit evidence related to Microsoft Entra ID, MFA, Conditional Access, RBAC, privileged access, Microsoft Purview DLP, Defender for Cloud, WAF/DNS processes, SIEM/logging, and incident management workflows.
- I helped map findings from technical teams and security platforms into remediation actions, policy updates, risk notes, compliance artifacts, and management-ready recommendations.
- I documented and reviewed access control, incident response, business continuity, CSIRT operations, escalation paths, evidence handling, audit trails, and operational responsibilities for institutional use.

Sysadmin IT Infrastructure | Cloud Administrator | IT Support

CLARORD | May 2022 – March 2026 | Remote | Part-Time Contract

- I supported a cloud infrastructure project for a Citrix environment involving 500+ virtual machines, helping validate server provisioning steps, VM readiness, domain join requirements, user access, application delivery prerequisites, and secure desktop/application availability.
- I administered and supported hybrid infrastructure across VMware, Nutanix, Citrix, Microsoft Azure, Active Directory, Windows Server, Linux, and Microsoft 365, including VM lifecycle tasks, access administration, basic capacity checks, and service availability reviews.
- I managed Azure cloud servers and related operational tasks, including user and group access, privileged access controls, server patching, update validation, resource availability checks, and coordination of infrastructure changes with technical teams.
- I documented repeatable server provisioning and baseline configuration procedures, including naming standards, access requirements, patching steps, monitoring checks, and operational handoff tasks, so they could be reused as IaC-ready workflows.
- I created and adapted practical Terraform-based examples for Azure infrastructure standardization, including resource groups, virtual networks, subnets, network security groups, virtual machines, storage accounts, tagging standards, and baseline configuration documentation.
- I worked with Kubernetes and containerization concepts from an infrastructure support perspective, reviewing application hosting requirements such as networking, DNS, ports, environment variables, secrets handling, monitoring needs, and deployment dependencies before production support.
- I followed CyberArk-supported privileged access practices to help protect administrative credentials, reduce direct credential exposure, and support controlled access to critical infrastructure components.
- I supported backup and recovery operations with Veeam Backup and update management with WSUS, helping validate backup availability, patch status, recovery readiness, and operational continuity for infrastructure services.
- I performed access administration, infrastructure troubleshooting, system health checks, patch validation, and incident response support for server, application, access, and security-related issues.

Cybersecurity Internship

Secretariat of the Inter-American Committee against Terrorism - OAS | Oct 2024 - May 2025 | Remote

- I investigated CSIRT operations and cybersecurity services delivered through the CSIRT Americas network.
- I researched incident management processes and maturity practices based on NIST, SANS, FIRST, and SIM3.
- I supported CSIRT maturity evaluation activities under a SIM3-certified auditor by reviewing interviews, documentation, operational processes, and evidence.
- I analyzed account lifecycle controls, privileged access processes, and incident response procedures related to access abuse and identity-related risks.
- I developed structured findings and recommendations to improve access governance, monitoring, incident handling, and CSIRT maturity.

Technical Assistant | Cloud, DevOps

Planeta Web Services | Feb 2023 - Jun 2023 | Remote

- I supported AWS and Microsoft Azure environments, including cloud instance deployment, access configuration, secure credentials, and technical documentation.
- I managed developer provisioning, group-based permissions, secure authentication policies, and access segmentation across cloud and collaboration platforms.
- I supported DevOps automation, CI/CD integrations, version-controlled deployments, QA activities, and environment provisioning.
- I worked with Infrastructure as Code concepts by documenting repeatable cloud deployment patterns, environment variables, access prerequisites, and deployment steps for development and QA environments.
- I gained practical exposure to containerized application deployment concepts, including Docker/Kubernetes terminology, service dependencies, environment configuration, and deployment readiness checks.
- I created technical documentation in English, onboarding guides, platform instructions, and developer references.
- I coordinated team tasks as acting Scrum Master and supported occasional development activities using C#, Java, and MySQL knowledge.

KEY PROJECTS

- Azure Tenant Hardening & Microsoft Security Benchmark Alignment: I supported security posture reviews for Microsoft Azure and Microsoft 365 environments across public-sector institutions, including Microsoft Secure Score, Defender for Cloud recommendations, Entra ID controls, MFA, Conditional Access, RBAC, privileged roles, audit visibility, Azure Policy findings, and remediation priorities aligned with Microsoft Cloud Security Benchmark.
- Terraform-Based Azure Infrastructure Standardization: I created and adapted Terraform-based templates and documentation to standardize Azure resource deployment patterns for resource groups, virtual networks, subnets, NSGs, storage accounts, virtual machines, Key Vault baseline settings, tags, and environment naming conventions.
- Azure Application and Virtual Machine Deployment Support: I supported deployment and configuration of Azure workloads, including virtual machines, App Services, DNS/WAF routing, monitoring requirements, access controls, and secure production cutover activities.
- Kubernetes/AKS Readiness and Cloud-Native Infrastructure Support: I reviewed containerized workload requirements with technical teams, focusing on networking, identity, access, secrets, monitoring, and security considerations needed before AKS or Kubernetes-based deployments.
- Government Cloud and Identity Security Operations: I supported secure administration of cloud and identity environments for multiple institutions, including Entra ID, RBAC, MFA, Conditional Access, privileged access controls, WAF/DNS integrations, Defender for Cloud recommendations, Microsoft 365 security settings, and monitoring/security platform integrations.
- Citrix Cloud Infrastructure Deployment: I supported deployment of 500+ virtual machines for secure application and desktop delivery using VMware, Nutanix, Citrix, Azure, CyberArk, Veeam, and WSUS.

- Cybersecurity Mentoring and Institutional Awareness: I delivered and supported mentoring and awareness initiatives for children, students, and institutions on cybersecurity, responsible technology use, identity protection, phishing prevention, secure access, tenant hardening, cloud security basics, and Microsoft 365 security hygiene.

EDUCATION

IT Security Technologist - Instituto tecnológico de las Americas (ITLA), 2021 - 2023
Computer Science - Centro Educativo Politécnico Virgen de la Altagracia, 2016 - 2020

CERTIFICATIONS AND TRAINING

Microsoft Azure Fundamentals (AZ-900) | Microsoft Security, Compliance, and Identity Fundamentals (SC-900) | AWS badges | International training in cybersecurity, forensics, and audits with OAS (Secretariat of the Inter-American Committee against Terrorism), INCIBE-CERT (Leon, Spain), CISA, and LAC4 | Preparing for AZ-104, Preparing for CompTIA Security+

LANGUAGES

Spanish: Native | English: Intermediate - Advanced
